

Dredged Material Disposal Plan (DMDP) Site No. 34

RCP/ CRMP Plot No. 54 TRS Map: 18-11-30.2 Tax Lot(s): 8900 River Segment: 4

Location: 1,300' west of Duncan Slough Bridge

Vicinity: South of Duncan Slough

Base Zone: Exclusive Farm Use E25

CRMP Combining Zone: Natural Resource Conservation /NRC (M. U. 26)

2004 aerial with site boundaries

“Old alluvial plain formation at mouth of drainage. Flat and now bermed, site was part of Duncan Slough floodplain.” (DMDP 1978)

“This site has been used for pastureland and will probably continue with such use. Dredged materials, once worked up with the soil, would probably enhance the agricultural value of the land.” (DMDP 1978)

“The site does pose potential problems with water quality if outfall were allowed to go to Duncan Slough. This, however, would probably be denied in the permit process. Thus, outfall lines extending the distance to the main channel could be very costly. The site would have low priority for channel maintenance dredging.” (DMDP 1978)

Site size: 5.4 acres.

Site capacity: 43,500 cubic yards at 5 feet depth.

Vicinity of DMDP Site 34 - Coastal Resource Management Plan zoning designations.

- Flood Hazard Areas: Light Blue = Floodplain; Darker Blue = Floodway. (Above)
